RE: Compliance Evaluation Inspection  
UTR000005397

Dear Mr. Clark:

On September 15, 2010, a compliance evaluation inspection was performed at the Salt Lake Airport Waste Glycol Processing facility by representatives of the Utah Division of Solid and Hazardous Waste. The purpose of the inspection was to assess your with applicable hazardous waste management rules (R-315 of the Utah Administrative Code).

During the inspection and review of your Contingency Plan, it was noted that copies of the plan had not been distributed to the local fire departments, hospitals, police and State and local emergency response teams as required by R315-7-11.4(c) of the Rules. Also, the Contingency Plan did not describe how all emergency and hazardous waste spill cleanup and response equipment is cleaned and fit for use prior to resuming activities after a release at the facility as required by R 315-7-11(h)(2) of the Rules.

Please submit to this office on or before November 12, 2010, a written response to the issues describe above. No other problems were noted. Thank you for your corporation.

If you have any questions, please call Alex Pashley at (801) 536-0231.

Sincerely,

Scott T. Anderson, Director
